

MICROWAVE VISION ANNOUNCES MAJOR CONTRACTS TOTALING € 8M

Paris, November 3, 2010 – **The MICROWAVE VISION GROUP announces the signing of major contracts totaling € 8M.**

The group has recently won several contracts:

- A € 400k contract in the University and R&D market, where increased activity is benefiting Microwave Vision. A recent order for a compact range system from a German university follows a similar order from the Georgia Institute of Technology (GA, USA), from the first half of 2010.
- Three new contracts in the Aerospace and Defense sector total € 3.7M. Two orders are for planar near field systems in Asia: one is a very large planar scanner and the other is a StarLine system, which incorporates the multi-probe MV-Scan™ technology. The third contract, which was awarded by a large European aerospace company, is for a large antenna positioning system.

"The StarLine control system represents a breakthrough of multi-probe technology into the Aerospace and Defense market. Other MV-Scan™ system sales within this sector are being negotiated and are expected to be finalized soon," said Philippe Garreau, President of Microwave Vision.

- Finally, in the Telecommunications market, Microwave Vision reports many orders of SG 64, SG 32, SG 24 and StarLab. This demand is mainly from orders in the United States, where smartphone sales continue to drive growth in this sector. The remainder of these orders comes from Asia, particularly Japan, where sales which were delayed for several months have begun to materialize since early September.

These new contracts reflect the strength of Microwave Vision's market position, particularly its international presence and diverse product portfolio. The group is well-situated to benefit from growth factors in its target industries.

Publication of third quarter sales after closing on November 15, 2010

About MICROWAVE VISION:

MICROWAVE VISION (NYSE-Euronext: ALMIC) is one of the leading world producers of antenna test and measuring systems for the radiocommunication, automotive, defense, and aerospace fields. With the inclusion of the business activities of ORBIT/FR Inc. (OTC Bulletin Board: ORFR), an American company purchased in May 2008, the group is strengthening its position on its markets by offering the most innovative and comprehensive solutions available. The range of solutions offered combines high-precision electronic scanners developed by SATIMO INDUSTRIES using its "microwave vision" technology with ORBIT/FR products developed using high-performance positioner and electromechanical scanner technology. MICROWAVE VISION is present in 8 countries (France, Italy, Germany, Sweden, USA, Israel, China, and Japan) and has 240 employees. The group boasts a clientele of major international accounts. It recorded sales of €34.8m for its year ended December 31 2009. MICROWAVE VISION is OSEO certified "Innovative Enterprise." Alternext, FR ISIN code 0004058949 <http://www.microwavevision.com>
